

Take a Look at D&D

D&D Automation has been in the business of integrating controls worldwide since 1992. The Canadian Corporation, D&D has grown at an average rate of 20% per annum with projected growth for years to come.

D&D's automation services are focused on your immediate project requirements and long term goals.

The diversity of our projects include industries such as mining, plastics, automotive, food & beverage, logistics & warehousing, specialty chemical, water and pharmaceutical.

D&D offers a wide range of project management services for turn-key solution.

We also provide a complete spectrum of technical services for your industrial process.

Our innovative technologies are a fundamental investment for your company's competitive edge.

Project Services

D&D provides a complete package of project services. These services include: project management, consulting, conceptual design, detailed design build, custom software, shop test, site start-up and support. These services are provided on an individual bases or as turn-key solutions.

Our experts work closely with your team to map out the best solution for your project. Our support services ensure your project's success. From design to start-up, D&D's project leaders are there for you and your project goals.

Technical Services

Engineering Design:

D&D's discrete and process controls technologists are leading edge designers of reliable automation systems ranging from robotic machine control to large scale plant control.

Our technologists take great pride in providing the right hardware and design for your specific application. D&D's design standards are based on safety, dependability, and serviceability.

CADD Services:

Our AutoCAD specialists provide accurate and efficient electrical drawings to support your system. We have an extensive library of CADD templates that we are building over the years. This enables us to rapidly provide design packages to our customers. Hourly rates or full project quotes are available.

Mechanical Design:

SolidWorks or AutoCAD Inventor designers for automation equipment and tooling.

Take a Look at D&D

Controls Programming:

D&D provides controls programming from safety devices to full line control.

PLC Programming:

Our experienced controls and automation technologists design and execute turn-key PLC packages including PLC programming, architecture, communication, documentation and installations. Our experience is developed in many applications.

Vision Systems:

D&D will provide software development, image processing & analysis, lighting & optic design and installation & machine integration for your vision system requirements.

Robot Integration:

D&D provides robotic and motion control programming. D&D will ensure efficiency and maximum performance in your robotic system.

HMI & SCADA Solutions:

D&D technologists define your system requirements, provide you with proper communication platform, amalgamate your control systems and unify your process.

D&D's controls and automation technologists are experienced with all of the latest software packages available today.

Instrumentation Services:

Verification, calibration and loop testing are critical pieces to process control efficiency and accuracy. D&D is fully equipped to provide these services to their clients in all process related industries and has a great deal of experience in providing these services.

Information Management:

D&D's experienced Manufacturing Intelligence team designs and implements data collection, report generation software. Our MI expertise includes programming, data collection, display, and integration with existing systems. D&D provides implementation, training, start-up and support.
